

Wirecard CEE Integration Documentation

Created: 2019-12-12 05:07

Demo Data

The following demo data may be used both for trying out our product demos prior to integration and checking your integration in demo mode. For the different payment methods you will need financial data like credit card numbers, specific usernames and passwords. Since these data are not real financial data you will receive an error message from Wirecard if you use them in production mode.

Please note that our product demos and demo mode settings usually allow for more services and features (e.g. availability of additional payment methods) than you may have ordered for your online shop. Please contact our sales teams if you wish to use one of these services and features also in your productive system.

For **demo and test customerIds and secrets** please refer to the respective data for Wirecard Checkout Page and Wirecard Checkout Seamless.
