Customization for Mobile Devices

The following chapters are only relevant if you do NOT use the responsive design of Wirecard Checkout Page. If you wish to switch to the responsive design, please contact our support teams.

Prerequisites

- Customization for desktop
- Enabled request parameter "layout" for tablet and/or smartphone

General information

If the default design and layout of the Wirecard Checkout Page mobile do not fit to the design and layout of your online shop, you have the possibility to modify the current design of the Wirecard Checkout Page mobile by using customized templates for tablet and smartphone devices.

Editing the templates

Downloading and unzipping the templates file for tablet and/or smartphone customization:

Device type	Template	MD5 hash
Tablet	customization template for tablet	0179B614349F56EE78F682360F46AE2B
Smartphone	customization template for smartphone	F1866603075AB022EDC18C03A1AA3E12

These mobile templates are based on jQuery mobile.

We are using the following standard themes:

- Theme a for general layout
- Theme b for the next button
- Theme d for the QINFOTEXT and QORDERINFO (ui-body-d)
- Theme e for cancel button and for QERRORTEXT on intermediate page (ui-body-e)

You can use jQuery's Themeroller for a visual editing of the themes. Additionally you have the possibility to directly edit the files in your favorite text editor.
