Wirecard Shop Plugin for OpenCart

Installation guide for Wirecard Checkout Page

This installation guide shows the step-by-step installation of the plugin to your installed shop system on your web server. Please test your online shop and the configuration of the plugin on a test system before installing the plugin on your production system.

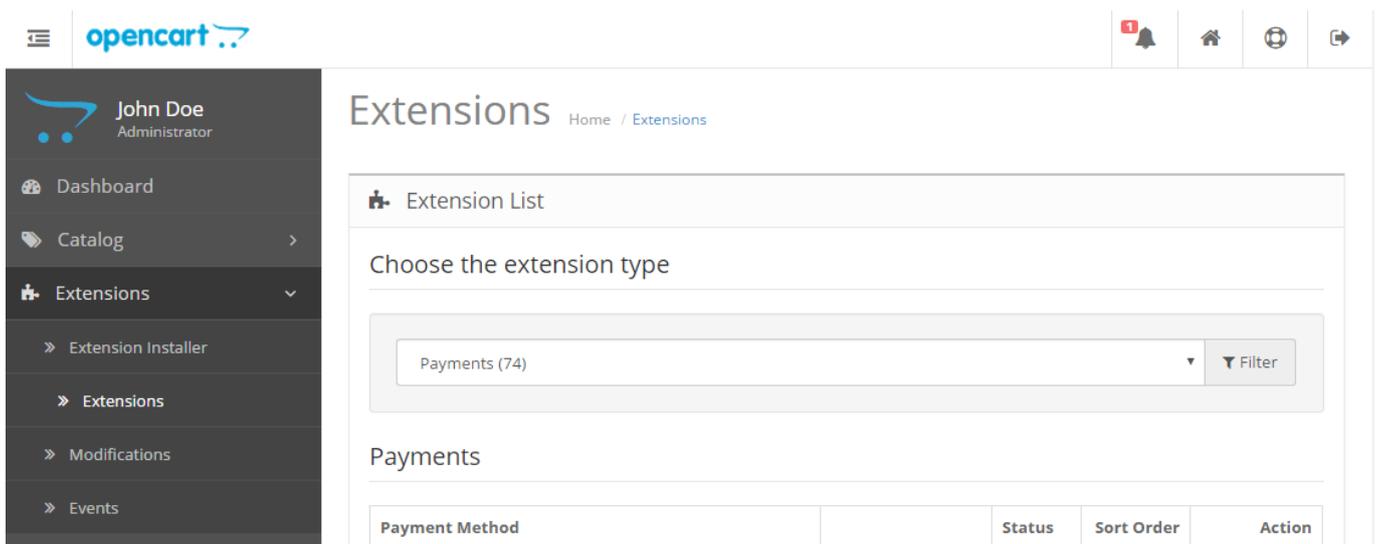

Step 1

Please unzip the file and copy the folders named “admin”, “catalog” and “system” to the root folder of your OpenCart installation on your web server.

Step 2

Please log in as Administrator to the administration section of OpenCart. This may be available at [https://\[your_server_name\]/admin](https://[your_server_name]/admin).

Then select “Extensions” → “Payments” within the menu.

The screenshot shows the OpenCart administrator interface. The top navigation bar includes the OpenCart logo, a notification bell with a red '1', and icons for home, search, and user profile. The left sidebar menu is open, showing the user 'John Doe Administrator' and the 'Extensions' menu item selected. The main content area is titled 'Extensions' and shows a breadcrumb 'Home / Extensions'. Below this, there is a section for 'Extension List' with a sub-section 'Choose the extension type'. A dropdown menu is open, showing 'Payments (74)' selected, with a 'Filter' button. Below the dropdown, the 'Payments' section is visible, showing a table with columns for 'Payment Method', 'Status', 'Sort Order', and 'Action'.

A page displaying all payment methods is opened:

Wirecard Checkout Page Select	wirecard	Enabled	 
Wirecard Checkout Page Bancontact/Mister Cash	wirecard	Disabled	 
Wirecard Checkout Page CLICK2PAY	wirecard	Disabled	 
Wirecard Checkout Page Credit Card	wirecard	Enabled	 
Wirecard Checkout Page Credit Card mobile-, tele-order.	wirecard	Disabled	 
Wirecard Checkout Page eKonto	wirecard	Disabled	 
Wirecard Checkout Page Direct Debit	wirecard	Disabled	 
Wirecard Checkout Page ePay.bg	wirecard	Disabled	 
Wirecard Checkout Page eps Online Bank Transfer	wirecard	Disabled	 
Wirecard Checkout Page giropay	wirecard	Disabled	 
Wirecard Checkout Page iDEAL	wirecard	Disabled	 
Wirecard Checkout Page Installment	wirecard	Disabled	 
Wirecard Checkout Page InstantBank	wirecard	Disabled	 
Wirecard Checkout Page Invoice	wirecard	Disabled	 

All Wirecard related payment methods beginning with the name “Wirecard” and followed with the name of the payment method are displayed. To install a specific payment method click on the corresponding link “[Install]” within the “Action” column. After successful installation of all your required payment methods you are able to “[Edit]” or “[Uninstall]” each payment method individually.

Step 3

To present a specific payment method to your consumer in your online shop you have to enable and configure that payment method.

Click on “[Edit]” within the “Action” column of the corresponding payment method.

You are able to configure the following parameters for a specific payment method:

Enable	Enables or disables corresponding payment method.
Customer ID	Your Customer ID you received from Wirecard CEE.
Secret	Your secret you also received from Wirecard CEE.
Success Status	Status for a successfully completed payment of your consumer.
Failure Status	Status for a failed payment of your consumer.
Cancel Status	Status for a payment canceled by your consumer.
Auto Deposit	Activating or deactivating the automated deposit immediately after a successful payment of your consumer. (This parameter has to be enabled by Wirecard CEE for your Customer ID.)
Duplicate Request Check	Enables or disables checking if the same order has been unintentionally sent more than once by your consumer. This is useful to prevent processing of the same order more than once, especially if your consumer presses the "Reload" button of the web browser.
Max Retries	Defines the maximum number of retries you consumer can do within one payment. A value of 0 means indefinitely number of retries. (This parameter has to be enabled by Wirecard CEE for your Customer ID.)
Iframe	If enabled the Wirecard Checkout Page will be displayed within an iframe in your online shop. Otherwise it will be displayed within the current window of the web browser of your consumer.
Send Customer Information?	Enables or disables the sending of customer data.

Additionally you are able to configure some optional parameters for a specific payment method:

Shop ID	Contains the unique identifier for your shop within the Wirecard Checkout Page. (This parameter has to be enabled by Wirecard CEE for your Customer ID.)
Background Color	Background color of the Wirecard Checkout pages as hexadecimal RGB-values like "CCDDAA".
Logo Url	Optional URL to an image which is used as your online shop logo within the Wirecard Checkout pages.
Display Text	Optional text which is displayed together with the data of the order.
Confirm e-Mail Address	Contains an e-mail address of the merchant for receiving payment information details regarding the orders of the consumers of your online shop. (This parameter has to be enabled by Wirecard CEE for your Customer ID.)
Customer Statement	Contains a text which will be displayed on the invoice of financial institution of your consumer.

If you have filled in all values in the form please click on the "Save" Button:

The screenshot shows the 'Wirecard Checkout Page Select' configuration page. On the left is a sidebar with navigation options: Dashboard, Catalog, Extensions (with sub-items: Extension Installer, Extensions, Modifications, Events), Design, Sales, Customers, Marketing, System, and Reports. Below the sidebar is a summary card showing 'Orders Completed' at 70%, 'Orders Processing' at 70%, and 'Other Statuses' at 30%. The main content area is titled 'Wirecard Checkout Page Select' and includes a breadcrumb trail: Home / Payment / Wirecard Checkout Page Select. Below the title is an 'Edit Wirecard Checkout Page Select' form with the following fields: 'Enable' (set to 'Enabled'), '* Customer ID' (D200001), '* Secret' (B8AKTPWBRMNBV455FG6M2DANE99WU2), 'Shop ID', '* Service Url', 'Background Color', 'Logo Url', 'Display Text', and 'Success Status' (set to 'Canceled').

The different order-status have to be configured as shown in the screenshot.

This close-up shows the configuration for order statuses. The 'Display Text' field is empty. The 'Success Status' is set to 'Processing'. The 'Pending Status' is set to 'Pending'. The 'Failure Status' is set to 'Failed'. The 'Cancel Status' is set to 'Canceled'. Each field has a help icon (question mark) next to its label.

The status of the payment method should now be active and the payment method should be available

in the ordering process of your online shop:
