Plugins for Wirecard Checkout Page

Our solutions can be integrated by downloading, installing and configuring a plugin, which is a software component tailored for the specific shop system, adding Wirecard Checkout Page. We offer free of charge shop plugins for a great number of shop systems.

Please have a look at General information regarding the use of the plugins within your shop system. For the relevant security issues, please visit [Securing your online shop](#).

The following shop systems are supported by Wirecard Checkout Page:

- ePages
- Gambio
- JTL-Shop
- Magento 1.x
- Magento 2
- modified eCommerce
- OpenCart
- osCommerce
- OXID eSales
- PrestaShop
- Salesforce Commerce Cloud (Demandware)
- Shopware
- Ubercart (Drupal)
- VirtueMart (Joomla!)
- WooCommerce (WordPress)
- xt:Commerce 3
- xt:Commerce 4/5 (Veyton)

You can use the plugins in demo and test mode for checking your integration using the demo mode and test mode.

For detailed technical information you can use the description of the request and response parameters used for communication between your shop (and shop plugin) and Wirecard Checkout:

- Request parameters
- Response parameters

Please be aware that there are many web sites offering various shop plugins including Wirecard CEE as payment service provider. This is based on the idea of an open Wirecard Checkout interface which can be integrated and used by everyone. However, if you want to use a shop plugin developed and maintained by Wirecard CEE, please only use one of the plugins listed on this page.
