Wirecard Shop Plugin for Ubercart 3.6

Installation guide for Wirecard Checkout Page

This installation guide shows the step-by-step installation of the plugin to your installed shop system on your web server. Please test your online shop and the configuration of the plugin on a test system before installing the plugin on your production system.

Step 1

Please upload the zip/tar file containing the Wirecard Checkout Page plugin to the modules directory of your Drupal site (`sites/all/modules`) and extract the archive. Then go to (as Admin) the “Modules” menu and activate the plugin:

The screenshot shows the configuration page for the 'Wirecard Checkout Page' module. On the left, there is a checkbox and the module name. The main content area contains a description: 'Wirecard CEE is a popular payment service provider (PSP) and has connections with over 20 national and international currencies.' Below this, a list of required modules is shown, each with '(enabled)' next to it: Date, Date API, Payment, Order, Product, Image, File, Field, Field SQL storage, Store, Rules, Entity tokens, Entity API, Views, and Chaos tools. A 'Help' link is visible on the right side.

There is a dependency on the Date module <https://drupal.org/project/date>, this module has to be installed prior to Wirecard Checkout Page.

Step 2

In order to use the plugin, you need to configure the plugin. Go to “Store → Payment method”:

Dashboard		Store	Content	Structure	Appearance	People	Modules	Configuration	Reports	Help
Add content Find content View products										
PAYMENT METHOD								OPERATIONS		
<input checked="" type="checkbox"/>	<input type="checkbox"/>	Wirecard Checkout Page Select						settings	conditions	
<input checked="" type="checkbox"/>	<input type="checkbox"/>	Wirecard Checkout Page Credit Card						settings	conditions	
<input checked="" type="checkbox"/>	<input type="checkbox"/>	Wirecard Checkout Page Credit Card MoTo						settings	conditions	
<input checked="" type="checkbox"/>	<input type="checkbox"/>	Wirecard Checkout Page Maestro SecureCode						settings	conditions	
<input checked="" type="checkbox"/>	<input type="checkbox"/>	Wirecard Checkout Page eps Online Bank Transfer						settings	conditions	
<input checked="" type="checkbox"/>	<input type="checkbox"/>	Wirecard Checkout Page IDEAL						settings	conditions	
<input checked="" type="checkbox"/>	<input type="checkbox"/>	Wirecard Checkout Page giropay						settings	conditions	
<input checked="" type="checkbox"/>	<input type="checkbox"/>	Wirecard Checkout Page SOFORT banking (PIN/TAN)						settings	conditions	
<input checked="" type="checkbox"/>	<input type="checkbox"/>	Wirecard Checkout Page Mobile Phone Invoicing						settings	conditions	
<input checked="" type="checkbox"/>	<input type="checkbox"/>	Wirecard Checkout Page paysafecard						settings	conditions	
<input checked="" type="checkbox"/>	<input type="checkbox"/>	Wirecard Checkout Page @QUICK						settings	conditions	
<input checked="" type="checkbox"/>	<input type="checkbox"/>	Wirecard Checkout Page PayPal						settings	conditions	
<input checked="" type="checkbox"/>	<input type="checkbox"/>	Wirecard Checkout Page Direct Debit						settings	conditions	
<input checked="" type="checkbox"/>	<input type="checkbox"/>	Wirecard Checkout Page CLICK2PAY						settings	conditions	
<input checked="" type="checkbox"/>	<input type="checkbox"/>	Wirecard Checkout Page Invoice						settings	conditions	
<input checked="" type="checkbox"/>	<input type="checkbox"/>	Wirecard Checkout Page Installment						settings	conditions

Auto deposit
Auto deposit

Service Url

Backlink on the payment page to your shop, usually links to contact or imprint page

Image Url

Image Url for displaying an image on the payment page (95x65 pixels preferred)

Max. retries

Maximal number of payment retries

Display Text

Display Text on the payment page

Set the Customer Id and the Secret. It is also important to set the Service Url as otherwise no payments are possible. These settings are the same for all payment methods.

Step 3

In the last step, verify if the Wirecard Checkout Page payment method is shown on the checkout page:

Payment method

Select a payment method from the following options.

Subtotal:	€25.00
Order total:	€25.00

- Wirecard Checkout Page Select
- Wirecard Checkout Page Credit Card
- Wirecard Checkout Page Credit Card MoTo
- Wirecard Checkout Page Maestro SecureCode
- Wirecard Checkout Page eps Online Bank Transfer
- Wirecard Checkout Page iDEAL
- Wirecard Checkout Page giropay
- Wirecard Checkout Page SOFORT banking (PIN/TAN)
- Wirecard Checkout Page Mobile Phone Invoicing
- Wirecard Checkout Page paysafecard
- Wirecard Checkout Page @QUICK
- Wirecard Checkout Page PayPal
- Wirecard Checkout Page Direct Debit
- Wirecard Checkout Page CLICK2PAY
- Wirecard Checkout Page Invoice
- Wirecard Checkout Page Installment
- Wirecard Checkout Page Bancontact/Mister Cash
- Wirecard Checkout Page Przelewy24
- Wirecard Checkout Page moneta.ru
- Wirecard Checkout Page POLi
- Wirecard Checkout Page eKonto
- Wirecard Checkout Page InstantBank
- Wirecard Checkout Page mpass

FAQ

I enabled Invoice or Installment as payment method in the administration panel. Why is none of these two shown on my shop frontend page?

You have to add the birthdate field to the customers registration, go to "Configuration" → "Account settings" → "Manage fields":

This form lets administrators add, edit, and arrange fields for storing user data.

[Show row](#)

LABEL	MACHINE NAME	FIELD TYPE	WIDGET	OPERATIONS
+ User name and password	account	User module account form elements.		
+ Timezone	timezone	User module timezone form element.		
+ Add new field				
<input type="text" value="birthdate"/> Label	field_birthdate [Edit]	<input type="text" value="Date (ISO format)"/> Type of data to store.	<input type="text" value="Text field"/> Form element to edit the data.	
+ Add existing field				
<input type="text"/> Label	<input type="text" value="- Select an existing field -"/> Field to share		<input type="text" value="- Select a widget -"/> Form element to edit the data.	

[Save](#)

Please click save and on the following field settings page uncheck "hour" and "minute" and save the field settings:

birthdate

[EDIT](#)
[FIELD SETTINGS](#)
[WIDGET TYPE](#)
[DELETE](#)

[Home](#) » [Administration](#) » [Configuration](#) » [People](#) » [Account settings](#) » [Manage fields](#) » [birthdate](#)

FIELD SETTINGS

These settings apply to the *birthdate* field everywhere it is used. These settings impact the way that data is stored in the database and cannot be changed once data has been created.

Date attributes to collect

Year
 Month
 Day
 Hour
 Minute
 Second

Select the date attributes to collect and store.

Collect an end date
End dates are used to collect duration. E.g., allow an event to start on September 15, and end on September 16.

Cache dates
Date objects can be created and cached as date fields are loaded rather than when they are displayed to improve performance.

[Save field settings](#)

Upper and lower order amount limit can be added using conditions on the payment method (ubercart core feature).

Invoice and installment are only visible if the criteria defined in your contract concluded with the financial institution (e.g. payolution) are met. For more information please check the payment method specific documentation for your invoice and/or installment provider payolution: Invoice and Installment.
